# Greening The Global Economy (Boston Review Books)

## **Synopsis**

In order to control climate change, the International Panel on Climate Change (IPCC) estimates that greenhouse gas emissions will need to fall by about forty percent by 2030. Achieving the target goals will be highly challenging. Yet in *Greening the Global Economy*, economist Robert Pollin shows that they are attainable through steady, large-scale investments -- totaling about 1.5 percent of global GDP on an annual basis -- in both energy efficiency and clean renewable energy sources. Not only that: Pollin argues that with the right investments, these efforts will expand employment and drive economic growth. Drawing on years of research, Pollin explores all aspects of the problem: how much energy will be needed in a range of industrialized and developing economies; what efficiency targets should be; and what kinds of industrial policy will maximize investment and support private and public partnerships in green growth so that a clean energy transformation can unfold without broad subsidies. All too frequently, inaction on climate change is blamed on its potential harm to the economy. Pollin shows greening the economy is not only possible but necessary: global economic growth depends on it.

## **Book Information**

Series: Boston Review Books

Hardcover: 176 pages

Publisher: The MIT Press (November 13, 2015)

Language: English

ISBN-10: 0262028239

ISBN-13: 978-0262028233

Product Dimensions: 5.4 x 0.5 x 8 inches

Shipping Weight: 1.6 pounds (View shipping rates and policies)

Average Customer Review: 4.2 out of 5 stars 6 customer reviews

Best Sellers Rank: #494,557 in Books (See Top 100 in Books) #118 in Books > Engineering & Transportation > Engineering > Energy Production & Extraction > Alternative & Renewable #640 in Books > Science & Math > Earth Sciences > Climatology #1186 in Books > Business & Money > Economics > Environmental Economics

## **Customer Reviews**

In clear and readable prose, Robert Pollin details how, contrary to the insidious claims of Big Oil, burning fossil fuels at current rates is bad for the economy, bad for the environment, and bad for the poor. *Greening the Global Economy* powerfully demonstrates that investing in efficiency and

renewable energy generates a far better standard of living than the current alternative -- abject and massive dependency on fossil fuel. (Jerry Brown, Governor of California)Based on the best available evidence and economic analysis, Greening the Global Economy develops a workable investment scenario to reduce greenhouse gases and insure us against potential climate warming disasters while creating jobs and raising living standards. It shows that what stands in the way is not the basic economics but the machinations of fossil fuel firms who risk losing some of their trillions in assets. Humanity vs. Fossil Troglodytes. Which side are you on? (Richard Freeman, Herbert Ascherman Professor of Economics, Harvard University) Greening the Global Economy by Robert Pollin provides a very clear discussion of a roadmap to carbon reduction that drastically reduces fossil fuel consumption by combining energy efficiency with an increased reliance on renewable energy sources. He makes the case that dramatic reductions do not require great economic hardship or personal discomfort. Many confusions and misapprehensions that have clouded debates over energy policy are convincingly set to rest. The book is an important contribution to our ongoing dialogue about the future of energy in the United States and in the world. (Mara Prentiss, author of Energy Revolution: The Physics and the Promise of Efficient Technology)For a long time, critics have said that we have pitted economic development against climate change solutions. In this enlightening book, Robert Pollin proves that climate solutions deployed at scale are in fact the only way to pull developing countries out of poverty and put in place the twenty-first-century infrastructure the world badly needs. (Jigar Shah, cofounder of Generate Capital; founder and former CEO of SunEdison)At last -- a positive approach to dealing with climate change! Robert Pollin's important new book is a must read, cutting through current debates with a positive agenda: it is possible to reduce carbon emissions by redirecting some investment to 'clean energy' in a way that expands employment opportunities and improves living standards, even in developing and low-income countries. (Jayati Ghosh, Professor of Economics, Jawaharlal Nehru University, New Delhi) Greening the Global Economy provides a penetrating analysis of the challenge of global warming and a compelling plan to stabilize the environment while creating jobs and advancing social justice in the U.S. and other countries in the developed and developing worlds. As leaders of the global labor and environmental movements struggle to find common ground on these issues, and as governments marshal the will to finally address the dual challenges of climate change and just transition, they must engage the important work of Robert Pollin. (Ron Blackwell, former Chief Economist, UNITE and AFL-CIO)

Robert Pollin is Professor of Economics and Codirector of the Political Economy Research Institute

at the University of Massachusetts, Amherst. He has served as a consultant on energy and the economy for a wide range of organizations and institutions, including the U.S. Department of Energy, the International Labour Organization, the United Nations Industrial Development Program (UNIDO), and numerous non-governmental organizations. He is author of *Back to Full Employment* (MIT Press), also in the *Boston Review* series, and *Contours of Descent: U.S. Economic Fractures and the Landscape of Austerity*.

After the Paris climate conference, we in the US know it will take big changes to meet our commitments. In *Greening the Global Economy*, Robert Pollin outlines a program for reducing carbon emissions, in the US and world-wide, while creating a new generation of good jobs and sustainable growth. You and your loved ones need this book. It outlines a plan that can rally a majority of Americans to save the earth and build real prosperity. That's a formula for happy holidays now and into the future.

I am an international energy lawyer based in Washington DC, and found this book very helpful for my work. It is well organized and well written. In my view, it is the best book for any private sector or public sector expert interested in contributing to reshaping the energy sectors around the world to achieve the governments' INDC requirements and to meet the global climate change requirements. This book could easily serve as a handbook for the next 20 years. I highly recommend this book. Thank you Prof. Pollin for this well-researched and well-structured insightful and impactful book.

Thanks!

Pollin moves beyond the important but repetitive alarms about climate change to blazing the path to recovery. In one word the book is about investment and begins to detail how public investment plays a critical role in moving forward. "Greening" is very practical, looking at both energy efficiency as well as renewables and how public investment in both can make a difference. Larry Cohen

Pollin has written a very important and brave book. He may not be completely right but he has given other people something to work with and this should begin and further a project that is as important as anything that is happening. Pollin is as capable as any economist to attempt this. I don't doubt that other people from economic and other disciplines will try to critique and improve his work but he has made a tremendous jump. Bravo. I am not competent to comment in detail on his calculations, I

hope someone who is will review this book in depth. I also hope this book will spur others to do similar work. I create educational websites, Midwest Independent Research. I have one on global warming, mwir-globalwarming.blogspot.com. There is a book list.

Rather ironic that a book with this title is only available in print, and hardcover to boot!
