P R O L I A (Denosumab): Treats Osteoporosis, Bone Cancer, And Bone-Related Problems In Patients Who Have Cancer

Synopsis

Although, your health condition may impact your everyday life, do not let it define who you are. • PROLIA (Denosumab) injection is used to treat osteoporosis (a condition in which the bones become thin and weak and break easily) in men and in women who have undergone menopause ('change of life;' end of menstrual periods), who have an increased risk for fractures (broken bones) or who cannot take or did not respond to other medications for osteoporosis. PROLIA (Denosumab) injection is also used to treat bone loss in men with prostate cancer and in women with breast cancer who are receiving certain treatments that increase their risk for fractures. PROLIA (Denosumab) injection is in a class of medications called RANK ligand inhibitors. It works by decreasing bone breakdown and increasing bone strength and density (thickness). Thanks and may you have a good understanding about this drug • PROLIA (Denosumab). You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
