of this title.

An very good book on the relationship between vitamin C, as a therapeutic element, in cancer treatment and prevention. Cameron & Pauling were among the first to use such approach. Huge amount of research is being carried out on the topic, and everyone lead to positive results, confirming the findings of these medical researchers. Very well written. Obviously somewhat outdated in some topics, but one finds interesting insights not usually found in other books on cancer. [Hector C., ND, PhD]

Old but entirely valid research shows that VERY high doses of ascorbic acid, too high for our guts to tolerate, given I.V. do wondders to stop cancer growth and spread. Since it's a low cost option, no mega drug company has any motive for human clinical trials to "prove" its efficacy, exactly why so many cheap natural products never get fully tested...not enough profit in it.

This is a very good book, written by two experts in their fields. Linus Pauling has the unusual honor of being a double Nobel Prize winner. His insights into heart disease and cancer are very good. His advice on nutrition is invaluable.

This book could actually save yours of someone you love's life. Case studies more explanation of different cancers how why and when than I needed but it is all there. Great book with a lot of information in a small package.

Very good treatise on how vitamin c helps prevent and treat-cure certain cancers. Very good book for anyone dealing with cancer.

Nice clean copy unmarked fair text dust jacket everything very good THANK you.

Good explanation of cancer in general. Can be a little technical but information is very good.

This book is an indepth look at the power of vitamin C as a cancer preventive and cure. It is a must read for anyone who wants to assist themselves during their healing process or do some preventative maintenance for their body. It is a little technical in spots but mostly an easy read.
