This book presents information on the causative organisms, epidemiology and clinical features of helminth infections encountered both in temperate and tropical zones. It enables the reader to reach

an accurate diagnosis, select an appropriate chemotherapeutic agent, and judge alternative options for designing integrated, economic and sustainable worm control programs. Particular reference is made to helminth infections transmissible from animals to man. Typically human helminthoses (e.g. schistosomiasis, lymphatic filarioidoses, etc.) are also included.
